DETAILED ACTION

Allowable Subject Matter

1. Claims 1-16 are allowed.
2. The following is an examiner's statement of reasons for allowance: the art of record, when considered alone or in combination, does not anticipate nor render obvious the claimed invention of a compressed air supply system for a motor vehicle comprising a compressor, an air dryer having a desiccant bed and a blow-through valve, a primary and secondary reservoir located remote from the air dryer, and control components, wherein the control components control the air flow from the compressor through the air dryer for charging the reservoirs with dry compressed air and control a purging operation by controlling the air flow from the secondary reservoir through the desiccant bed and the blow-through valve to the atmosphere while maintaining an initial air pressure within the primary reservoir during purging. In the most relevant prior art found, U.S. Patent 6,074,462 to Quinn et al., the pressure in both the primary and secondary reservoirs drop during purging.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hewitt et al., Koenig et al., Elamin, Herbst et al., Eberling, and Yanagawa et al. teach similar air compression systems.
